1. Introduction

- This release document provides details about the release of the Hanwha Vision BI Dashboard Web Application.
- It includes AI camera data integration, people/vehicle counting, utilization reporting, and dashboard visualization etc.

2. Release Summary

Release Version	V3.0.4
Release Date	25-Sep-2025
Environment	UAT (Pre-Production)
Release Owner	Jayendra Makwana

2.1. New Features:

- **Updated operational time logic:** The system will now record data only within the defined operational time. All devices will be reset at the start of the operational time.

2.2. Enhancements:

- Added a **Search button** on the dashboard to load widget data. Now, when the user selects a floor, the system binds only the respective zones. Widget data loads or refreshes only in the following cases: when the dashboard is opened for the first time, the search button is clicked, the date range is changed, or during auto-refresh (when Today is selected).
- Updated the backup and **restore logic** to support uploading and restoring **larger backup** files.
- Improved performance of advanced report generation in CSV format.
- Enhanced background job execution for better stability.
- Improved zoom in/out functionality in the floor plan widget (now changes by 10%).
- Fixed issues with internal loaders across all widgets.
- Removed the default selection of the first zone when the dashboard is opened for the first time or when the floor selection is changed.

2.3. Bug Fixes:

- Fixed the **least and most** calculation logic in the **Average People Counting** widget.
- Checked the issue of auto-refresh in widgets when Today was not selected in the date range filter. The team tested multiple times but was **unable to reproduce** the issue.
- Corrected the background job logic to continue reading data in the background. This needs to be tested in the **live environment** to confirm the fix.
- Fixed the drag **icon issue** in the Floor Plans & Zones page on the dark theme.

2.4. Deployment Instructions:

- Please refer to the “**Installation Guidelines for Vision Insight BI Dashboard Web App**” document shared earlier.
