## 1. Introduction

- This release document provides details about the release of the Hanwha Vision BI Dashboard Web Application phase 4 milestone 1.
- It includes AI camera data integration, people/vehicle counting, utilization reporting, and dashboard visualization etc.

## 2. Release Summary

|                 |                      |
|-----------------|----------------------|
| Release Version | V4.0.0               |
| Release Date    | 08-Jan-2026          |
| Environment     | UAT (Pre-Production) |
| Release Owner   | Jayendra Makwana     |

### 2.1. New Features:

- Collect the data from camera if camera disconnects from application
  - In the next cycle, when the cameras come back online, the background task will fetch data starting from the time the camera was disconnected.
  - The system will recover data **only for the same day**. For example, if a device was disconnected yesterday and comes back online today, only today's data **after 12:00** will be recovered.
- Database Limit setting - Retention period, archive options should be available.
  - Users can enable **data retention** from **Settings > General > Retention Period**.
  - The retention period is configured in **months** to activate retention for transaction data.
  - Data will be archived in the existing database using a dedicated **archive collection**.
  - Archiving will **run daily**, based on the configured retention settings.
  - When viewing historical data, if the selected date range falls **outside the retention period**, the system will **retrieve data** from the archive collection.
- Database Auto Backup
  - The system will take a **daily backup** of the current database.
  - Users can change the backup storage location from **Settings > General > Scheduled Database Backup**.
  - By default, backups are stored at the location where the application is hosted. Users may also configure a **local path** (e.g., D:\Backup) or a **network path** (e.g., \\10.10.10.10\Backup) to store backups at a different location. Any manually configured path must be accessible from the system where the application is hosted.
  - Database backup files older than **7 days** will be automatically deleted.
  - In the event of a **server or database crash**, users can manually select a backup file from the configured path and restore the database.
- API not responding - How to know
  - If a camera is online but any of its APIs are not responding, the camera will be marked as **API Not Responding**.
  - The **API Error** widget will display features wise count of cameras with APIs that are not responding.
  - Clicking on the count will display a pop-up showing the details of the cameras that are not responding.

- Need to check X Series Wisenet 9 API issues
  - Latest X series camera support both WiseAI and SUNAPI. By default, it will first check WiseAI if it is installed on the camera device. Otherwise SUNAPI will be integrated.
- Time Format selection
  - Implement 12/24 hour format in all screens, widgets, reports as selected in the configuration by the user.
  - **Note:** All the export to CSV will be displayed in 24Hrs format always.
- Basic Maintenance Features
  - In **Manage Devices**, add **new fields** in Add/Edit Device: Asset Tag and Manufacturing Date.
  - Users can create and update Maintenance Plans and view existing maintenance plan details in a grid.
  - The following details will be captured while creating a new maintenance plan:
    - Plan name
    - Duration (in Months)
    - Start date (past date not allowed)
    - End date
    - Devices (multiselect)
  - A **background service** will generate maintenance schedule data **30 days prior** to the maintenance due date, based on the configured Maintenance Plan.
  - When a schedule is created, the default status will be **Not Started**. Users can update the maintenance status to In **Progress**, **Done**, or **Rework** as required.
  - Users can view all **scheduled maintenance records** in a grid.
  - Maintenance Schedule Page: Provides filters to search maintenance data by **floor, zone, date, and maintenance status** (floor and zone mapping will follow the existing implementation).
  - Maintenance Schedule Page: Displays maintenance data in a grid with standard **pagination**, based on the selected filters.
  - Maintenance Schedule Page: Allows users to **export maintenance data in CSV** format.
  - Maintenance Schedule Page: When the status is updated to **In Progress**, a **live preview image** will be captured and stored.
  - Users can **compare before and after images** and update the status to **Completed** if the image comparison result is satisfactory.
  - The **Maintenance Schedule page** will display the image comparison percentage for before-and-after maintenance images.
  - Users can change the maintenance status to **Rework** if they are not satisfied with the maintenance outcome.
  - A **status history** table will be displayed in the maintenance pop-up, allowing users to track multiple Rework cycles.
  - Users can **manually add a new maintenance record** for any device in case of high-priority maintenance requirements.
  - **Camera RMA status** will be displayed as per the Figma design.
  - **Camera maintenance status indicators** will be shown as per the Figma design.
  - **Cameras under maintenance** will be displayed as per the Figma design.
  - A **camera disconnection tracker** will be implemented as per the Figma design.
  - The system will generate **notifications for due** camera maintenance.
  - A new screen will be provided to **view, add, and update RMA** details for a camera.
    - Create new RMA
    - User can search RMA data by floor zone date and RMA status (In progress/Completed)
    - Display RMA data in Grid with standard pagination

- User will **manually** mark a camera as ""In RMA"" and once the camera is back from RMA, he must manually update that camera is back from RMA.
  - RMA Start Date Time and RMA End Date Time fields will be given.
- Need to have import option to upload cameras in Device management
  - Users can upload an Excel file containing camera details for **bulk upload**. A sample file will be available at the same location for reference.
  - The system will return error messages if any device details are incorrect or cannot be added to the system.
- Need to have export to CSV to see number of devices and list
  - Export to CSV Option is added in the Manage device page to **export** all devices.
- In/Out and Utilization Widgets Modifications
  - In all the **In/Out report**, show the difference of In/Out hourly, not showing it as adding up total every hour.
- In/Out Widget modifications
  - Old and new both designs are available for People and Vehicle counting widget
- Multiple UI Themes
  - User can set different **themes** from the preference.
  - 8 different **theme** shades are provided with **Dark** and **Light** mode.
- Admin User Creation
  - Currently, two users are created by default: Superadmin and Systemadmin. We have created a third default user named "**viadmin**".
  - Only the "**viadmin**" username and password will be shared by the Hanwha team with their customers.
  - After installing the application, when the "**viadmin**" user logs in for the first time, the user is forced to reset the password.
  - The "**viadmin**" user is visible only under the Superadmin role.
  - The Superadmin cannot delete the **viadmin** user and is not allowed to edit any details except the password.
  - If the password for the "viadmin" user is forgotten, the Superadmin can reset the password (handled by the Hanwha team only).
- Multi Language Support
  - Vision Insight BI Dashboard application should support below mentioned **languages**:
    - English
    - Arabic
    - Chinese
    - Czech
    - Danish
    - French
    - German
    - Italian
    - Korea
    - Spanish
    - Malay
    - Swedish
    - Polish
    - Portuguese
    - Norwegian
    - Hungarian

- Users can change the **language** from preference settings.
- Safety Measure Widget
  - Remove the helmet and jacket from safety measure widget. only mask to be considered for this widget (Currently we don't have any device to test Safety measure feature)

## **2.2. Enhancements:**

- In some cases, users are facing issue to perform delete operation from the application as per the machine configuration/machine access permission. All the API are updated to make delete operation smooth.

## **2.3. Bug Fixes:**

- N/A

## **2.4. Deployment Instructions:**

- Please refer to the “**Installation Guidelines for Vision Insight BI Dashboard Web App**” document shared earlier.
